

OCI Vision & Oracle Analytics

Just like a Box of Chocolates

Presented By: Žiga Vaupot

Date: 1. 6. 2023

Company Classification: Controlled

Introducing Qubix

Capabilities focused on
ERP, EPM, Analytics and
Data Engineering

Offices in 5
countries

1,000+
engagements

Global Oracle multi
award-winning
partner

Qubix

Introducing Version 1 – Your Partner in Success

A leading Digital Transformation provider of cloud-based applications, data and platform development, modernisation, testing and next-generation managed services.

25 Years

Proving Value of I.T.
and working with Oracle solutions
with **240+** Oracle Projects

700+

Customers
98% Customer retention

£250M+

Revenue (€280M)

12 Years

Voted as a Great Place to
Work

**Industry
Best Practice**

**Top Tier Deep
Technology Partners**

ORACLE Partner

Cloud Program

Red Hat

Gold
Microsoft Partner
Azure Expert MSP

3000+ Employees across our 17 offices worldwide:

Recent Acquisitions

Automation Logic

DevOps transformation and
delivery

Qubix

Ready-to-run Oracle
Solutions

Qubix  **VERSION 1**

Oracle Strategy - We understand Oracle like no other

One of the largest Oracles Practices in Europe

700+

dedicated ERP Consultants
delivering solutions and
services to **300+ customers**

500+

Oracle Certified
Professionals with
specialisation delivery
across the entire stack

**Premier Oracle
Partner**

With a track record that
extends over **25 years**

**Clients across all
industry sectors**

Providing complete end-to-
end solutions

Our work is award winning

- **GOLD: UKOUG ERP Partner of the Year Award**
- **GOLD: UKOUG HCM Partner of the Year Award**
- **GOLD: UKOUG Managed Services (Outsourcing and Operations) Partner of the Year Award - Applications**

We are experts in Oracle ERP, SCM, EPM, HCM and Analytics

**Oracle Cloud Apps
(SaaS)**

Leading experts in enabling enterprises to harness the power of Oracle Cloud Apps (ERP,EPM/HCM/Payroll/SCM) in an increasingly complex technology landscape, we help organisations to transition smoothly from legacy solutions to Oracle Cloud Applications.

E-Business Suite

Experts in managing E-Business Suite implementations, upgrades and managed services for enterprise organisations across a broad range of sectors. We are responsible for some of the largest European implementations of E-Business Suite.

JD Edwards

Our JD Edwards experts offer leading enterprise customers in manufacturing industries the complete range of services required to license, install, implement and maintain their JD Edwards systems, from legacy through to World A9.2 and EnterpriseOne 9.2.

Peoplesoft

Experts in managing PeopleSoft implementations, upgrades and managed services for enterprise organisations across a broad range of sectors. We are responsible for over 200 PeopleSoft projects across 125 customers.

Recognised experts in Oracle Cloud

ORACLE | Service Partner
Expertise in
Oracle ERP Financials Cloud
in EMEA-UKIE

ORACLE | Service Partner
Expertise in
Human Resources (Core)
in EMEA-Western Europe

Cloud Program

ORACLE | Service Partner
Expertise in
CSPE: Oracle Cloud Platform -
Oracle E-Business Suite
Applications to Oracle Cloud
in EMEA-Western Europe

ORACLE | Service Partner
Expertise in
Oracle Cloud Platform Integration
in EMEA-Western Europe

ORACLE | Service Partner
Expertise in
PeopleSoft Applications to
Oracle Cloud
in EMEA-Western Europe

ORACLE | Service Partner
Expertise in
Oracle E-Business Suite
Applications to Oracle Cloud
in EMEA-Western Europe

Delivering customer success in Oracle Applications

The Task

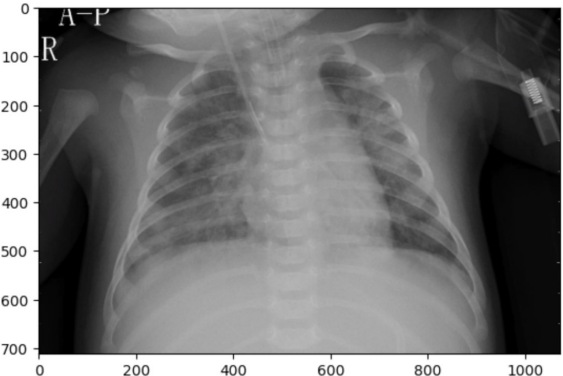

- From the library of Chest X-Ray images* train the model and use it to identify which patients have pneumonia

* Dataset source: <https://www.kaggle.com/datasets/paultimothymooney/chest-xray-pneumonia>

First thought: OCI Data Science

```
[8]: img = cv2.imread("kaggle/input/chest-xray-pneumonia/chest_xray/chest_xray/val/PNEUMONIA/person1946_bacteria_4875.jpeg")
[9]: plt.imshow(img)
plt.show()
```

Data Preparation

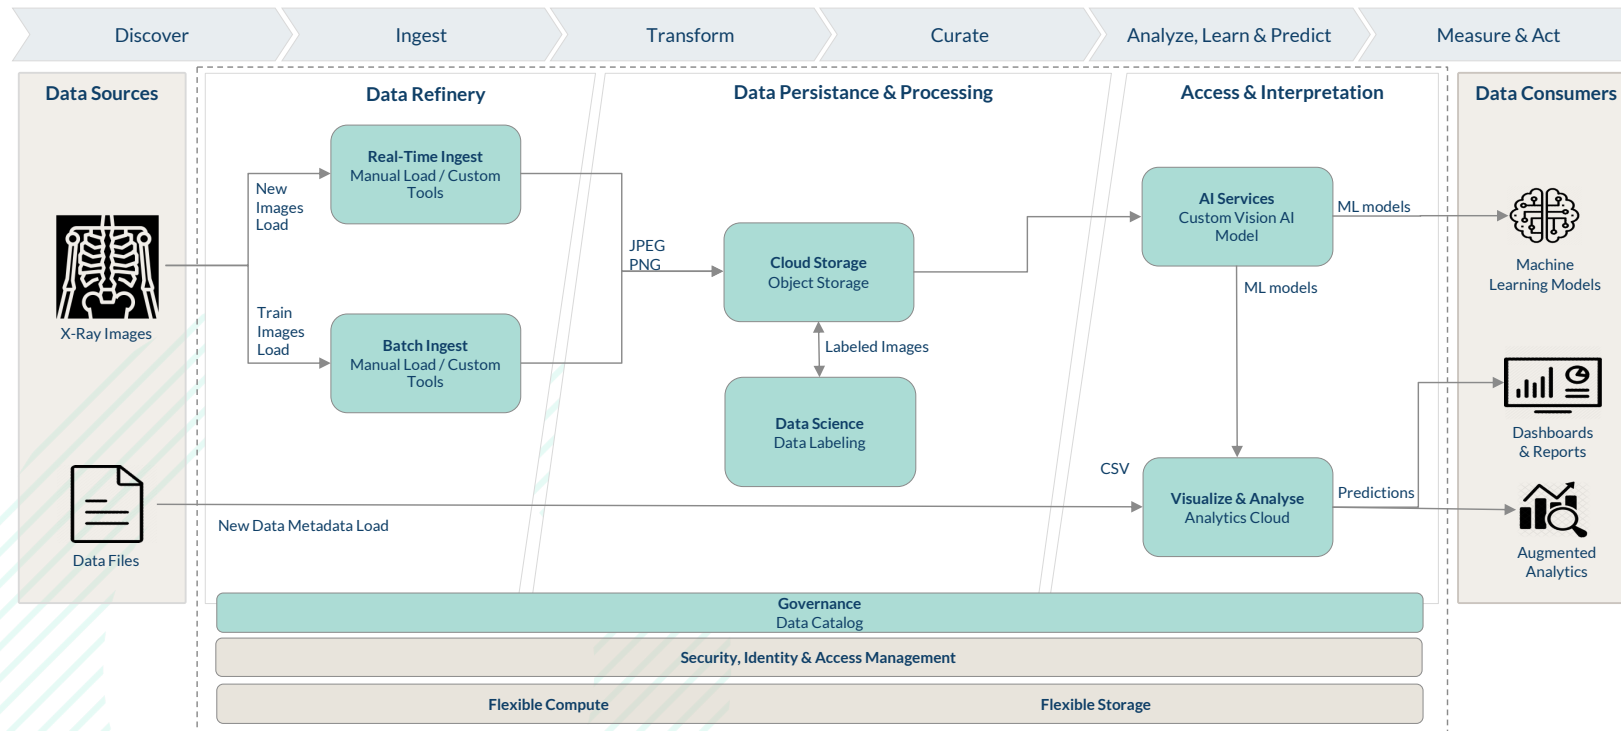

```
[10]: img_size = 150
labels = ["NORMAL", "PNEUMONIA"]

def data_prep(data_dir):
    data = []
    for label in labels:
        path = os.path.join(data_dir, label)
        class_num = labels.index(label)
        for img in os.listdir(path):
            # print(os.path.join(path, img))
            # clear_output(wait=True)
            if img.endswith('.jpeg'):
                img_arr = cv2.imread(os.path.join(path, img), cv2.IMREAD_GRAYSCALE)
                resize_arr = cv2.resize(img_arr, (img_size, img_size))
                data.append([resize_arr, class_num])
    return np.array(data)

[11]: train = data_prep('kaggle/input/chest-xray-pneumonia/chest_xray/chest_xray/train')
test = data_prep('kaggle/input/chest-xray-pneumonia/chest_xray/chest_xray/test')
val = data_prep('kaggle/input/chest-xray-pneumonia/chest_xray/chest_xray/val')
```

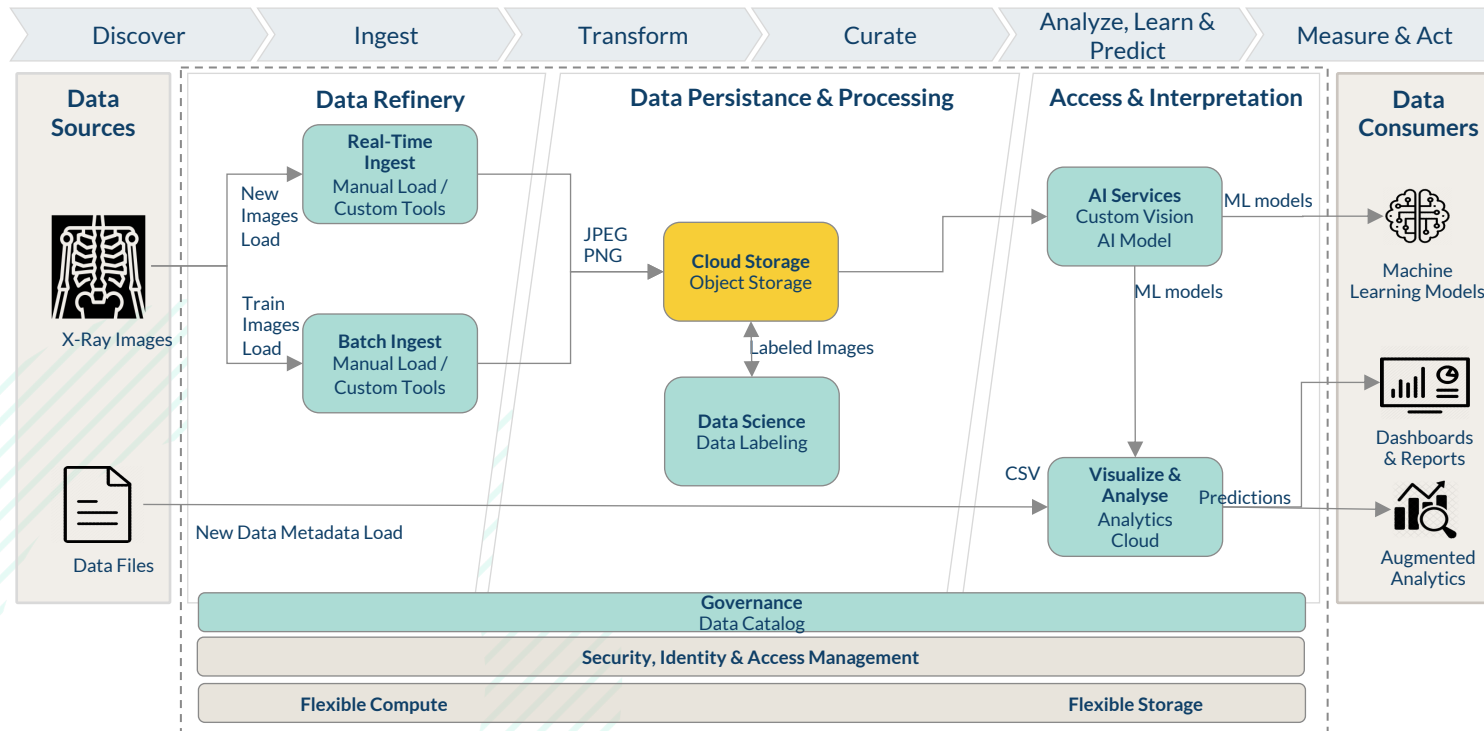

- Let's do some coding in Python and train the classification model
- Then analyze X-Ray images and learn if any of new images present pneumonia

Use some other OCI Data Lakehouse services instead?

- All X-Ray images are stored in **Object Storage**.
- Before we start a training exercise, X-Ray images are labeled using **Data Labeling** service.
- **Vision AI** service is used to train a custom model for Image Classification.
- New images are loaded and linked into **Oracle Analytics** to perform further analysis.

Object Storage

- Internet-scale, high-performance storage platform that offers reliable and cost-efficient data durability.
- Stores an unlimited amount of unstructured data of any content type, including analytic data and rich content, like images and videos.

Data Labeling

- OCI based service that is used to build labeled data sets.
- In case of images, we need to assign a label to an image, which describes the image and classifies it

Image Data Labeling

Data Labeling » [Dataset list](#) » [Pneumonia Dataset](#) » Add labels

Add labels: /PNEUMONIA/person9_bacteria_41.jpeg

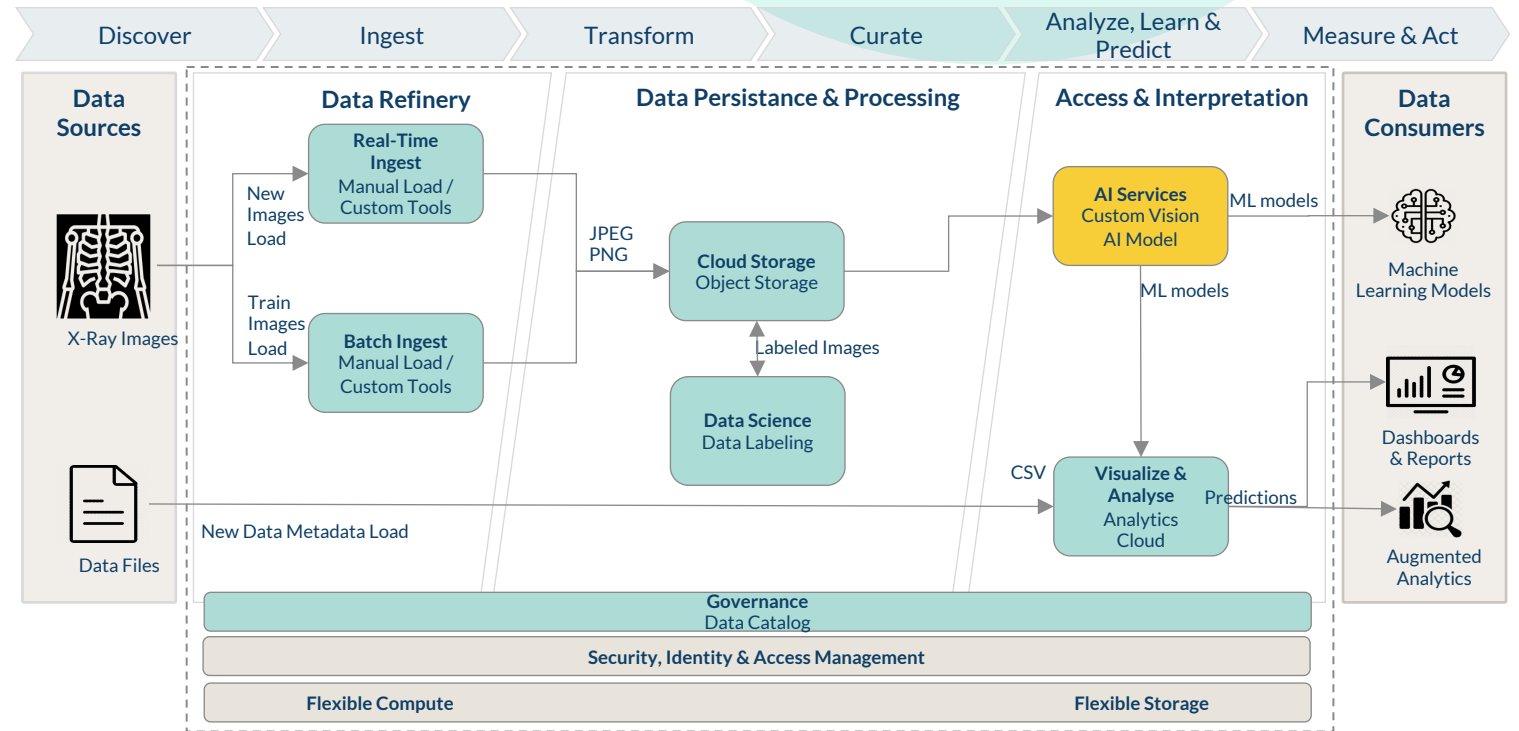

```
import dls_list_records
import dls_create_annotation
import sys
from config import *
import datetime
import labeling_schemes.first_letter as first_letter
import labeling_schemes.first_match as first_match

def main():
    num_records = list_records_limit
    count_batches=1
    count_records_total=0
    while num_records == list_records_limit: # if num_records < list_records_limit,
that would indicate the last loop i.e. batch
        names, ids, num_records = dls_list_records.main()
        count_records_in_batch=0
        for n in names:
            if labeling_algorithm == "first_match":
                first_match.main(name=n,
record_id=ids[count_records_in_batch])
            elif labeling_algorithm == "first_letter":
                first_letter.main(name=n,
record_id=ids[count_records_in_batch])
            count_records_in_batch+=1
            count_records_total+=1
            print("current time: " + str(datetime.datetime.now()))
            print("current batch #: " + str(count_batches))
            print("# records labeled in current batch: " +
str(count_records_in_batch))
            count_batches+=1
        count_batches-=1
        print("-----")
        print("TOTALS:")
        print("current time: " + str(datetime.datetime.now()))
        print("# batches: " + str(count_batches))
        print("# records labeled: " + str(count_records_total))
        print()
    main()
```

- OCI Vision is a serverless, multi-tenant service, accessible using the Console, or over REST APIs.
- Upload images to detect and classify objects in them.
- Process images in batch using asynchronous API endpoints

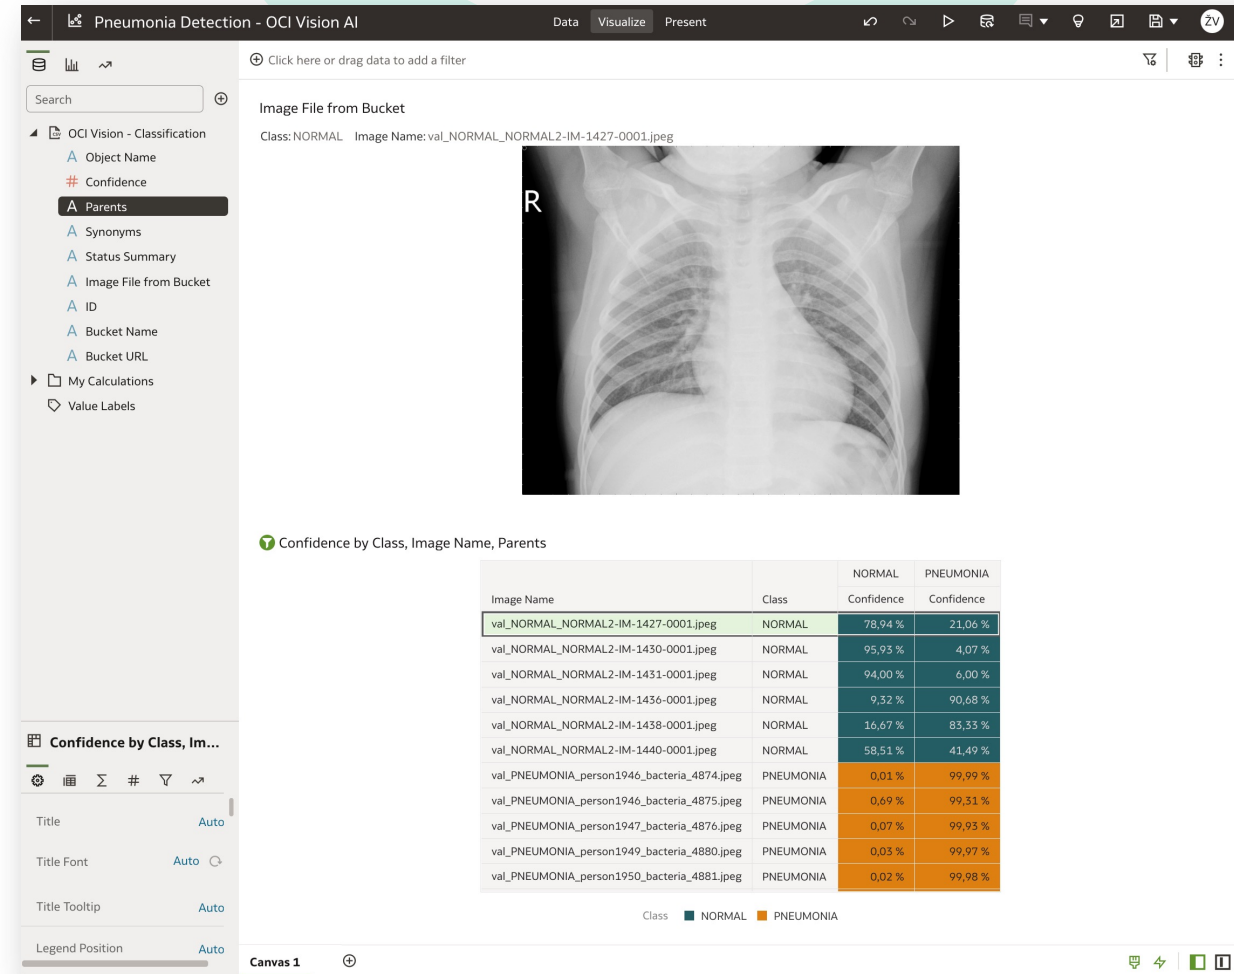

Oracle Analytics

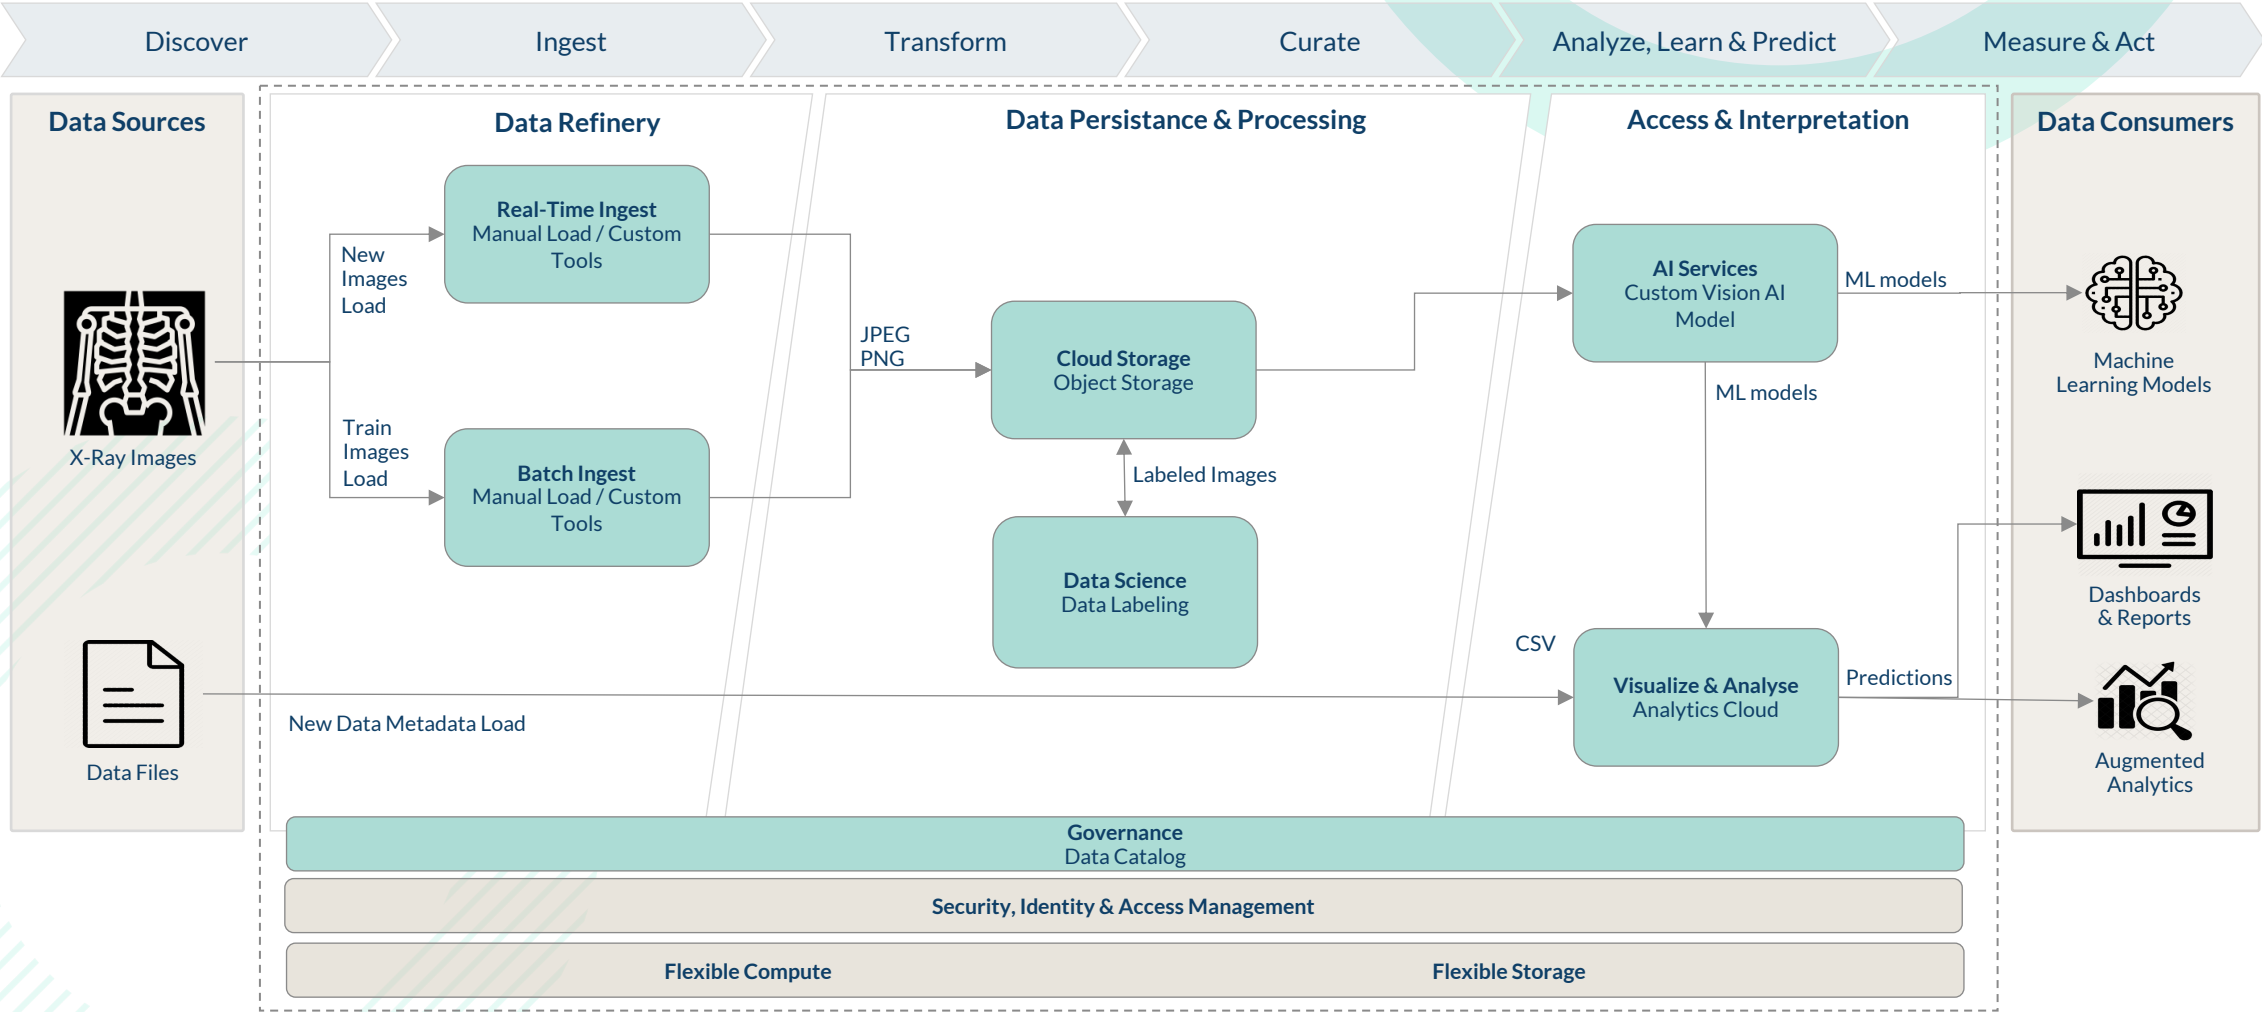

- Complete platform with ready-to-use services for a wide variety of workloads and data. Offering valuable, actionable insights from all types of data in the cloud, on-premises, or in a hybrid deployment.
- Empowers business users, data engineers, and data scientists to access and process relevant data, evaluate predictions, and make quick, accurate decisions.

Oracle Analytics and Vision AI working together

- Set connection to Vision AI
- Prepare images (metadata dataset) to analyze
- Register Vision AI model in Oracle Analytics
- Process images
- Perform analysis
